SA power supplies - update 8.15pm

ElectraNet, which operates the South Australian high voltage electricity transmission network, has restored supply on parts of its transmission network.

Customers in the Mid-North and Eyre Peninsula regions should prepare to be without power overnight and into tomorrow, due to damage on the transmission supply network supplied by ElectraNet.

We will progressively restore regional areas as more generation and transmission supply becomes available. Once the metro area is supplied this will provide sufficient network stability for us to start the process of restoring supply to country areas.

Power restoration may also be delayed where there has been damage to the distribution network caused by today's weather.

Customers also should note that more extreme weather is forecast tomorrow bringing further risk to electricity supplies.

Updates on power supply issues are available via our social channels, our website and via SMS. Please report downed powerlines and life threatening issues via 13 13 66.

If you rely on power supply for medical equipment, be prepared to action your back up plan.

Further updates will be issued as information becomes available.

For all media enquiries regarding the transmission supply issues, please contact ElectraNet on 8404 7436.
